5-5 18.1  
2 15. (Amended) A method for providing electronic reading device feedback, comprising:  
3 detecting portions of an address pattern on a formatted surface with an electronic  
4 reading device, wherein positions of the electronic reading device relative to the formatted surface  
5 are determined based on the detected portions of the address pattern;  
6 sending information relating to the detected portions of the address pattern to an  
7 electronic display device;  
8 converting said information into feedback relating to the detected portions of the  
9 address pattern; and  
10 displaying said feedback relating to the detected portions of the address pattern on  
the electronic display device.
